Description

The Laptop EPMA Cart has been designed to provide a high level of flexible storage without compromising on the ability to support hospital standard IT.

Dispensing medication is a major part of any EPMA roll out with more and more focus on accurate scanning of barcodes. Subsequently, the ability to add IT systems to dispensing carts is now key to a successful implementation.

Available in both powered and non-powered options, the carts can be configured to support laptops, thin clients and even PCs. This ensures that sacrifices need not be made on either the storage aspect or the chosen IT specification.

### **Storage Trays**

Specifically designed for use in situations where a large amount of secure storage is required
